Warranty and Product Insurance**

Protecting Your Valuable Asset: Warranty and Product Insurance

The associated warranty is an important component of a wind turbine investment and should be investigated fully prior to making a purchasing decision. In addition to learning what the warranty includes, there are other important factors to consider.

Make sure the manufacturer is able to fulfill warranty promises

The manufacturer should have a plan to meet the warranty obligations for their products. Ideally, the manufacturer should have a warranty reserve, where a percentage of wind turbine sales are set aside to cover potential warranty claims.

Learn the responsibilities of the client

Most warranties outline a service and maintenance schedule that must be adhered to for the warranty to be valid. If this is the case, it is the client's responsibility to make sure the proper service and maintenance is carried out.

Explore dealer offerings for service and maintenance

Most wind turbine dealers offer service and maintenance packages that meet the warranty requirements for the wind turbine models that they sell. In addition to helping clients meet their warranty obligations, these offers allow the client to predict their service and maintenance costs over the length of the contract.

Investigate insurance coverage

Credible manufacturers will be able to offer all-risk insurance for their products, which includes coverage for revenue lost due to downtime for repairs. Considering the significance of the investment, this is an incredibly important aspect providing peace of mind.

Learn more about wind turbine warranties

Orenda Energy Solutions is committed to ensuring our clients make as risk-free an investment, as possible. Our policy is to retain a percentage of revenue in a cash reserve specifically for warranty claims, and all-risk product insurance coverage is available for our clients. Furthermore, all our wind turbines come with a hydraulic tower that can be lowered without any heavy equipment, which works to minimize the cost of service and maintenance.
