PIONEERING SOLUTION

Orenda Energy Solutions,

a recent addition to the UK medium wind market, has designed and manufactured a pioneering

51kW wind turbine which facilitates simple and safe servicing due to a patented proprietary design mechanism embedded in its tower. This revolutionary turbine has been designed for the farming/ agriculture and rural/landowner communities who can optimise financial returns by utilising local Feed in Tariff (FiT) incentives. Orenda's Skye turbine has a fully integrated hydraulically hinged tower, designed to be lowered and raised by one operator using a wrench. It has its power pack located in the tower base and the company claims this technology makes Skye the most durable and efficient medium wind turbine currently available.
